SENTIMENT ANALYSIS DASHBOARD

INTERNSHIP SUMMARY

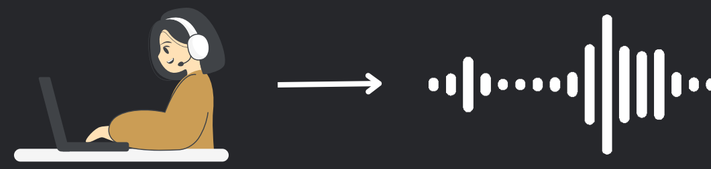

ADITT SINGH
MAY-JULY 2025
PLAKSHA UNIVERSITY

My Journey

When I first started my internship, I was still learning about data analytics and how big corporations use data to provide better services to the end user. The hands-on experience of building a sentiment engine to gauge the users experience of the service was a project that taught me numerous new skills.

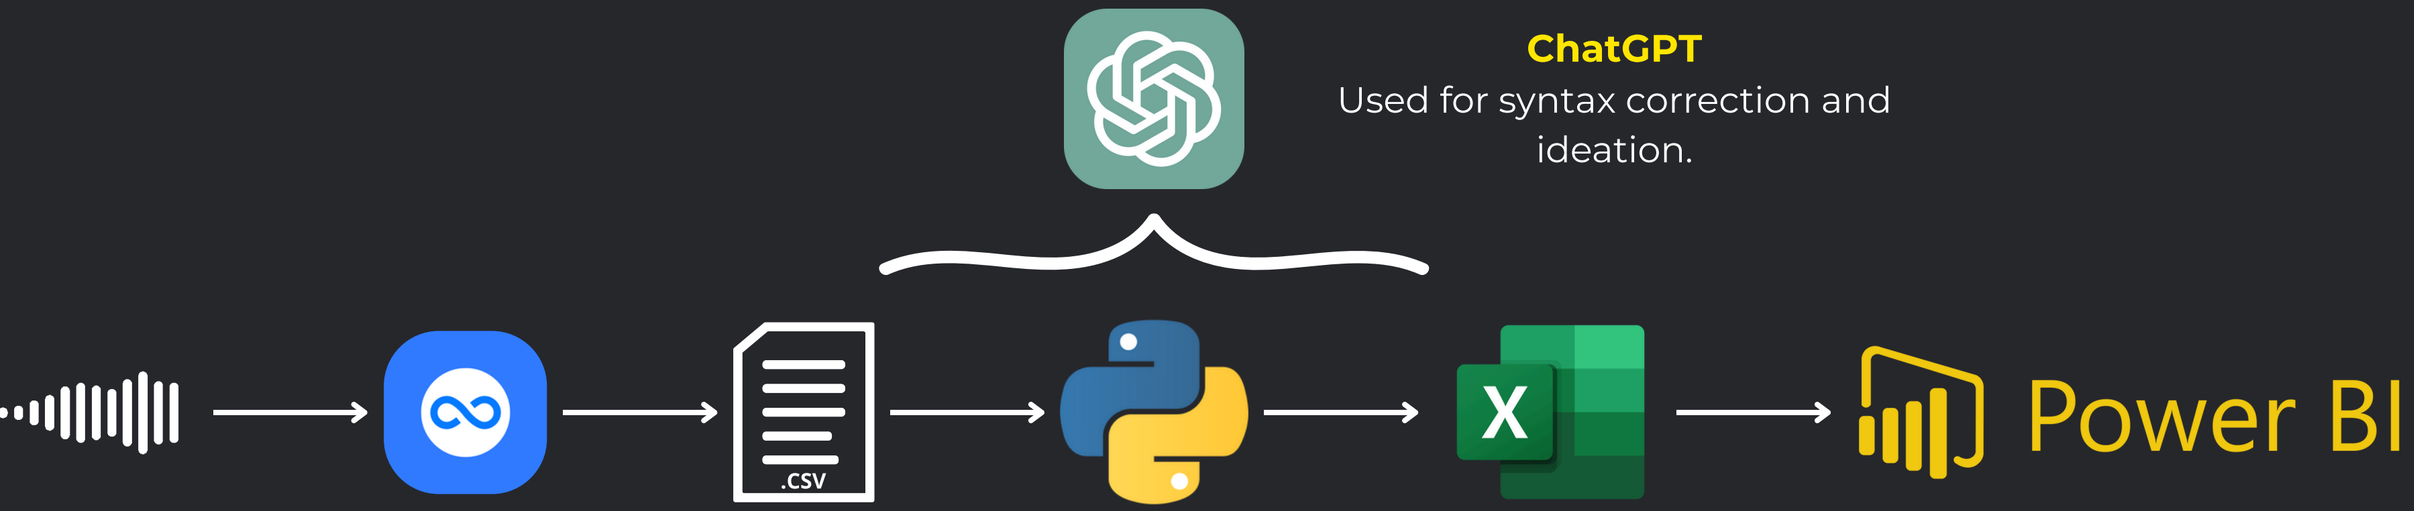

From learning new skills in Python to exploring new libraries and APIs and then using Power BI to make an interactive dashboard, it was a great learning curve for me.

What made this journey fluent was my mentor, Priya Ma'am's support for the entire duration and guidance in pushing me to come up with better results, eventually leading to this.

Customer Service

The Timeline

ChatGPT
Used for syntax correction and ideation.

TurboScribe.AI
For extracting csv files from audio files.

Python (NLTK/VADER)
Preprocessing data and scoring it to analyse.

Power BI
Creating an interactive dashboard to help users understand the sentiment.

DASHBOARD

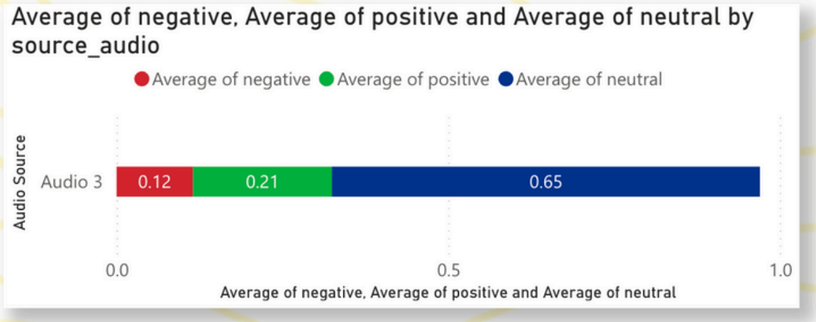

Sentiment Analysis Dashboard

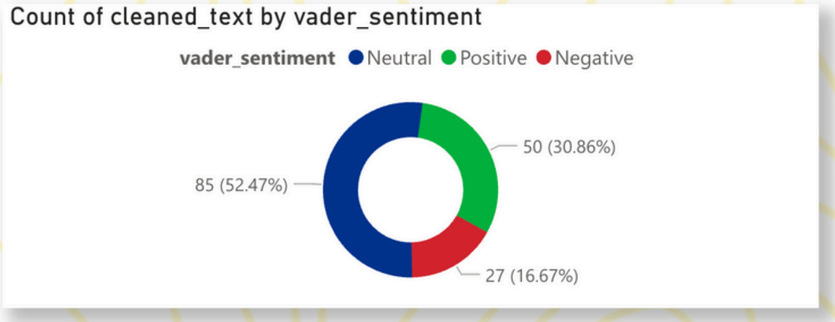

Interactive Dashboard for audio analysis

Choose Audio

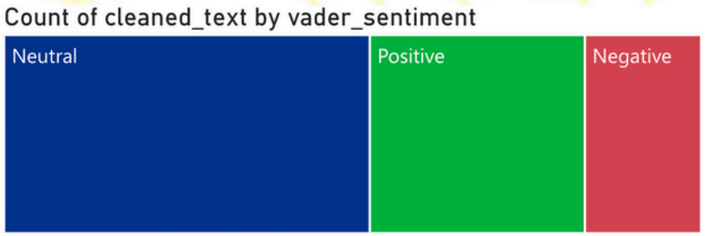

Audio 3

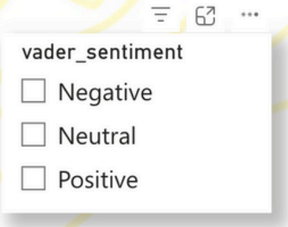

Positive Statements	Neutral Statements	Negative Statements
46	79	27
Count of cleaned_text	Count of cleaned_text	Count of cleaned_text

cleaned_text	vader_sentiment
yeah feedback company	Positive
yeah hope people appreciate	Positive
yeah right	Positive
yeah would awfully nice since	Positive
yes	Positive
yes st look	Positive

Takeaways

- Gained practical experience using Python libraries like VADER, Pandas, and NLTK to process real-world text data and extract sentiment-based insights.
- Create professional, interactive dashboards using Power BI — integrating slicers, KPI cards, custom visuals, and filters for seamless user experiences.
- From raw audio data to a finished report, I understood the entire data pipeline: preprocessing, analysing, visualising, and presenting results.

Thank-You!
